AB1073
Conserved hypothetical protein STY4917 [imported] - Salmonella enterica subsp. enterica
C;Species: Salmonella enterica subsp. enterica serovar Typhi
C;Species: Balmonella enterica subsp. enterica serovar Typhi
A;Note: this species has also been called Salmonella typhi
C;Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 09-Nov-2001
C;Accession: AB1073

Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ATP + L-glutamate + tRNA(Glu) = AMP +
-i phosphate + L-glutamyl-tRNA(Glu).
-!- SUBUNIT: MONOMER (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.
                                                                                                                                                 Campylobacter jejuni.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pyruvate + L-glutamate.

PATHWAY: Tryptophan biosynthesis; first step.
SUBUNIT: TETRAMEN OF TWO COMPONENTS I AND TWO COMPONENTS II.
MISCELLAMENGOUS: COMPONENT I CATALYZES THE FORMATION OF ANTHRANILATE
USING AMMONIA RATHER THAN GLUTAMINE, WHEREAS COMPONENT II PROVIDES
GLUTAMINE AMIDOTRANSFERASE ACTIVITY.
                                                                                                                                                                                                                                                                                       Chloroplast.

-!-CATALYTIC ACTIVITY: N(6),N(6).rimethyl-L-lysine + 2-
cxatalytic ACTIVITY: N(6),N(6),N(6),N(6).rimethyl-L-lysine + succinate + CO(2).
-!-COFACTOR: Iron and ascorbate.
-!-COFACTOR: Iron and ascorbate.
-!-PATHWAY: Carnitine biosynthesis; first step.
-!-SUBUNIT: Homodimer (By similarity).
-!-SUBUNIT: Homodimer (By similarity).
-!-SUBURITY: BELONGS TO THE GAMMA-BBH/TMLD FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TYLL MOUSE STANDARD; PRT; 421 AA.

"Molecular identification of a major retinoic-acid-synthesizing
enzyme, a retinaldehyde-specific dehydrogenase.";

Bur. J. Biochem. 240:15-22(1996).
-!- FUNCTION: RECOGNIZES AS SUBSTRATES RREE RETINAL AND CELLULAR
RETINOL-BINDING PROTEIN-BOHND RETINAL. DOES METABOLIZE OCTANAL AND
DECANAL BUT DOES NOT METABOLIZE CITRAL, BENZALDEHYDE
AND PROPANAL EFFICIENTLY (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: An aldehyde + NAD(+) + H(2)0 = an acid + NADH...
-!- PATHWAY: RETINOIC ACID BIOGENESIS.
-!- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
AND PROPANAL EFFICIENTLY (BY SIMILARITY).

CATALYTIC ACTIVITY: An aldehyde + NAD(+) + H(2)O = an acid + NADH.

CATALYTIC ACTIVITY: An aldehyde + NAD(+) + H(2)O = an acid + NADH.

BATHWAY: RETINOIC ACID BIOGENESIS.

SUBUNIT: HOMOTETRAMER (BY SIMILARITY).

SUBCELLULAR LOCATION: CYCOPJasmic.

SIMILARITY: BELONGS TO THE ALDEHYDE DEHYDROGENASES FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

  FINGLE AGE OF THE FORMATION OF FUNCTIONAL DISTINCT DOMAINS CRITICAL FOR SALTATORY CONDUCTION OF NERVE IMPULSES IN MYELINATED NERVE FIBERS. SEEMS TO DEMACRATE THE PRARANOBAL REGION OF THE AXO-GLIAL UNCTION. IN ASSOCIATION WITH CONTACTIN MAY HAVE A ROLE IN THE SIGNALING BETWEEN AXONS AND MYELINATING GLIAL. GELLS. MICE THAT LACK CWITAPL SKHIBLT TREMOR, ATAXIA, AND SIGNIFICANT MOTOR PARESIS. NORMAL PARANOBAL JUNCTIONS FAIL TO FORM, AND THE ORGANIZATION OF THE PARANOBAL LOOPS IS DISKUPTED. CONTACTIN IS UNDETECTABLE IN THE PARANOBAL LOOPS IS POTASSIUM CHANNELS ARE DISPLACED FROM THE JUXTAPARANOBAL INTO THE PARANOBAL DOMAINS. ALSO RESULTS IN A SEVERE DECREASE IN PERIPHERAL NERVE CONDUCTION VELOCITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBGLUIT: INTERACTS WITH CONTACTIN IN CIS FORM (BY SIMILARITY).
SUBCELULAR LOCATION: Type I membrane protein (Forential).
TISSUE SPECIFICITY: EXPRESSED IN BRAIN. IN MYELINATED NERVE FIBERS PREDOMINANTLY FOUND IN PARANODAL AXCOLLAL JUNCTIONS. IN THE INTERNODAL REGION OF MYELINATED AXONS IN THE CNS AND THE PNS ALSO SHOUND AS THIN LINE APPOSING THE INNER MESAXON OF THE MYELIN SHEATH. IN PNS NEURONS THIS LINE FORMS A CIRCUMFERRATIAL RING THAT APPOSES THE INNERMOST ASPECT OF SCHMIDT-LANTERMAN INCISURES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TISSUE SPECIFICITY.
